

GREEN BOF Charter Refining discussion

LUIS MIGUEL CONTRERAS MURILLO, Qin Wu
(GREEN BOF Proponents)

2024-08-20

Agenda

1. GREEN BOF Charter Status Update
2. Operators' requirements
3. What needs to be standardized in the framework
4. Next Step

GREEN BOF Charter Status Update

- The 1st GREEN BOF Charter Refinement meeting was concluded in August 13
 - Setup a regular meeting to refine Charter text
 - make charter ready by the end of this month.
 - useful to start with a few use cases.
 - include all IP network.
- Here is the latest update based on Tuesday's discussion,
 - <https://github.com/marisolpalmero/GREEN-bof/blob/main/GreenCharterProposal.md>
- The remaining issues include:
 - Revisit operator's requirements presented by Luis
 - what needs to be standardized in the framework

Operators' Goal and Usage

- Goal:
 - Improve energy efficiency and reduce energy consumption per traffic unit (MWh/PB) by 90% by 2025
 - Continue to consume 100% Renewable Energy
 - Reduce Scope 1 and 2 Carbon Emission by 70%
 - Reduce Scope 3 Value Chain Carbon Emission by 39%
 - Net-Zero
- Operators Usage Example
 - Track company's progress over time
 - Better Understand and manage Energy costs
 - Comply with Reporting requirements/regulations
 - Include them in voluntary reporting and disclosures
 - Compare networks with other company or operators
 - Other aspect such as Energy mix finding optimum capex/opex relation

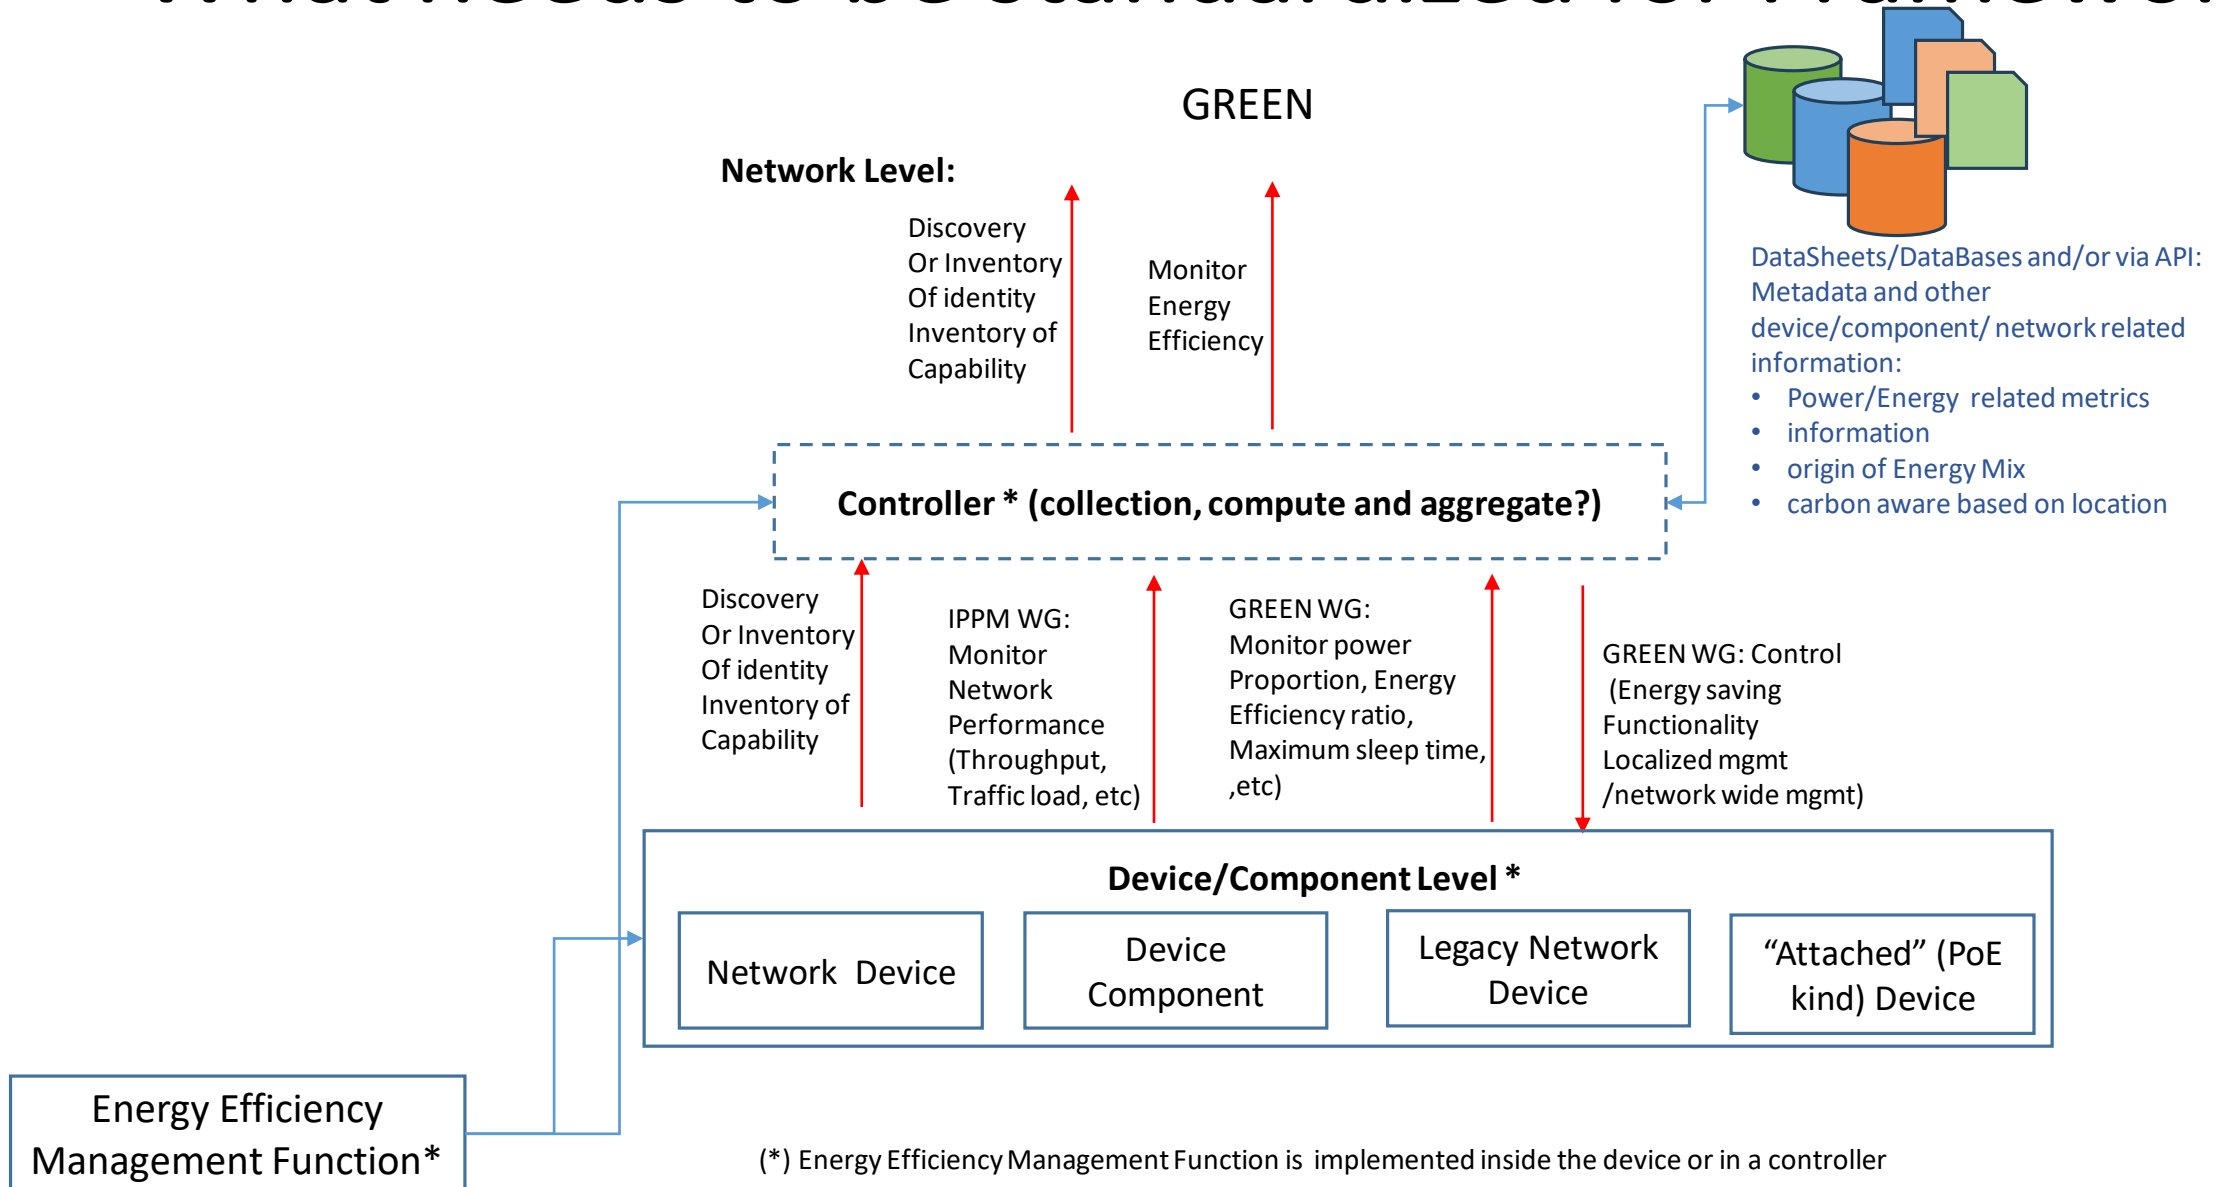

Operators' input

Category	Operators' requirements	Note
Observability	<ul style="list-style-type: none"> Component granularity, e.g., per line-card, per-port 	Per component measurement
	<ul style="list-style-type: none"> Availability of information on the power consumption of the device, without needing instrumentation connected to the infrastructure. 	Related to connected device case
	<ul style="list-style-type: none"> Triggering of alarms when consumption deviate from a nominal usage. 	Alarm notification
	<ul style="list-style-type: none"> Improvement of metering solutions (finer granularity, control of the energy efficiency and saving, interoperability, exposure) 	Standardized metering??
Analysis	<ul style="list-style-type: none"> Common definition of energy efficiency in network devices/components. 	Standard metric
	<ul style="list-style-type: none"> Common methodology of measurements for fair comparison 	Standard Methodology
	<ul style="list-style-type: none"> How to provide accurate figures (context of the measurement in terms of time period, location, traffic, etc) 	Time based, location based visualization
	<ul style="list-style-type: none"> Database for decision in case of large data transfer 	Database in controller
	<ul style="list-style-type: none"> Ability of multi-layer analysis (e.g., IP plus optical) 	POI Use Case
Control& Mgmt	<ul style="list-style-type: none"> To have devices with elastic power consumption according to the carried traffic 	Dynamic Energy Saving
	<ul style="list-style-type: none"> Support of network-wide energy saving and optimization functions 	Network Level Mgmt
	<ul style="list-style-type: none"> Support of network-wide control of energy optimization APIs, allowing external applications to optimize consumption 	Network Level Mgmt
	<ul style="list-style-type: none"> Advanced sleep mode, needing some sort of low power mode when node is lightly utilized 	Dynamic Energy Saving
	<ul style="list-style-type: none"> Ability to steer traffic based on power savings 	Energy aware routing
	<ul style="list-style-type: none"> Comparison of decision vs optimal case 	Intent based Concept
	<ul style="list-style-type: none"> Synchronous query support 	Network Level Query

Operators' input (Continued)

Miscellany	Operators' requirements	Note
Inventory Management	<ul style="list-style-type: none"> Inventory of power components (of devices, racks, etc) including together 	Component Level Device Level
Interaction with Other domain	<ul style="list-style-type: none"> Inclusion of data center networks in the picture 	Data Center Case
	<ul style="list-style-type: none"> Power reduction in cell 	Mobile Network Case
Sustainability & Carbon Emission	<ul style="list-style-type: none"> Optimize the overall CO2 footprint (i.e., energy mix based on source type) facilitating the engineering of PoP migration 	More renewable energy
	<ul style="list-style-type: none"> Support both GHG/energy units 	Measurement Unit
	<ul style="list-style-type: none"> Clean energy, gas emission and sustainability in general 	Carbon, renewable
	<ul style="list-style-type: none"> Accounting of legacy installed base GHG/energy 	Accounting Cost
	<ul style="list-style-type: none"> Track device/network Consumption Before Operation 	Manufacturing

What needs to be standardized for Framework

Next Step

- Is there any other open issues we need to resolved for the current Charter?
